PAGE, Ariz. – On Monday, November 19, Secretary of the Interior Ken Salazar will join Assistant Secretary for Water and Science Anne Castle, National Park Service Director Jonathan B. Jarvis and Bureau of Reclamation Commissioner Mike Connor to trigger the first "high-flow experimental release" at Glen Canyon Dam since 2008. The release is part of a new experimental long-term protocol announced in May by Secretary Salazar to better distribute sediment to conserve downstream resources, while meeting water and power needs and allowing continued scientific experimentation, data collection, and monitoring to more fully address the important resources in the Colorado River below Glen Canyon Dam.

For more information on the high flow experimental release, click here.
