Road, overlooking the Mud Lake Unit. A boardwalk and observation platform would be constructed on the southeast border of the Refuge along North Beach Road. A step-down plan for these facilities would be completed within 2 years of CCP completion. A new staff position would be dedicated to public outreach, and developing and delivering on-site interpretive and environmental education programs to local schools and community groups.

Alternative 3 (Preferred Alternative)

Wildlife and Habitat: Alternative 3, the Service’s Preferred Alternative, would emphasize partially restoring long-term habitat function, providing an acceptable range of natural habitat variability, increasing habitat resilience in the face of external stress, and increasing the long-term vigor of wildlife populations. While the Refuge would continue to provide breeding and fall migration habitat for waterfowl, the emphasis would be on providing a range of habitats, not only for waterfowl, but other migratory waterbirds. Management actions and water-level manipulations would simulate natural “drought,” “ambient,” or “flood” scenarios, and provide a variety of permanent, semi-permanent, seasonal, and temporary wetland habitats. The acreage of each habitat would vary annually within each unit, but the total Refuge acreage of each habitat would remain the same from year to year. Compared to Alternative 1, there would be a moderate increase in spring and fall seasonal and moist soil wetland habitats. Approximately 154 acres of small grain and legume crops would continue to be cultivated for waterfowl and other key wildlife species. Haying would be reduced to 1,492 acres (44 percent of current hayed acres), and 2,041 acres of previously hayed habitats would be restored or rehabilitated to native wet meadow or upland grass habitats by 2027. The Refuge would phase the reduction in haying over three 5-year cycles: 2013–2017; 2018–2022; and 2023–2027. An approximate 60:40 ratio of hayed-to-unhayed meadow would be managed for goose brooding and foraging areas. As in Alternative 2, the Refuge would study the feasibility of reducing sediment loads in the Mud Lake Complex and make recommendations by 2020 to reduce the sedimentation rate of Bear River water diversions and better exclude carp from refuge wetlands. As in Alternative 2, upland and riparian management activity would increase considerably.

Lake NWR would continue to be managed as described in Alternative 1. Compatible fishing opportunities would be expanded through construction of improved signage and small piers or fishing platforms along the Outlet Canal north of the Paris Dike. Fishing would also be allowed from the banks along Merkley Lake Road, consistent with State regulations. As in Alternatives 1 and 2, the Thomas Fork Unit would remain closed to all public access, but compatible hunting and trapping would remain open at Oxford Slough WPA.

Opportunities for observation and education would improve as additional facilities are developed, and a more diverse array of wetland habitats allows a wider variety of waterbirds and other species to flourish. Two turn-out parking areas (one with an observation platform and spotting scope) would be constructed along Merkley Lake Road, above the Mud Lake Unit. As in Alternative 2, a boardwalk and viewing platform would be constructed on the southeast border of the Refuge along North Beach Road; plans for a combined Refuge office and visitor contact station on or near the Refuge would be completed within 5 years of CCP completion, and funding would be sought to construct these facilities; a new staff position would be dedicated to public outreach, and developing and delivering on-site interpretive and environmental education programs to local schools and community groups.
