TONALEA/REDLAKE DAY SCHOOL
FEBRUARY 4, 2016
10:00 A.M.

TONALEA/REDLAKE TEAM:
KEIDRICK JUNE
PERFILLIEA CHARLIE
LYLE CLIFFORD
LENA DAYZIE
DELORES CLAW
MR. ESKEETS: Okay. We will get started as far
as some of these ground rules and stuff, and then we will
get started promptly at 10. Barbara is here so she can
take of the rest, but I will do the ground rules. My name
is Emerson Eskeets the division chief for the office of
facilities management and construction, so this is our
final presentation for today, so welcome.

Then I have audience in the back. First thing,
cell phones, if you can put it on vibration, that would be
good. And then the only media we're allowed here is the
transcriber. You all have these nifty little cameras
called cell phones, so refrain from recording, taking
pictures, please.

The other thing is, we have audience in the back
that have questions, I would ask them to write down their
questions, and we have the little boxes there that have
papers and pencil in them, so give them to me and I will
give it to the National Review Committee members.

And I want to say that there is 30 minutes for
the presentation that the presenters will provide, and then
there is 20 minutes on the questions and answers. There is
three questions that you're aware of that was part of your
package, so the committee members will put a lot of
emphasis on that, so hopefully with you're well prepared.

So welcome again. I do have in the audience a
senior adviser from the assistant secretary office, Cheryl.
And then somewhere I have my director Darrel LaRoche, and I
have my deputy director sitting here, Wallace Keays, so
let's start the show.

MS. BORGESON: All right. Thank you. Thank you,
Emerson. This is our last presentation. Welcome, Tonalea,
and just to let you know, as Emerson mentioned, you have 30
minutes for the presentation and 20 minutes for Q and A.
And I will give you a prompt, once you are down to ten
minutes, I will flash a sign to let you know you have ten
minutes left, and then five minutes and then we will start
the Q and A session. So your first speaker?

And also feel free if you want to come up here
and point out your pictures or your presentation, you are
welcome to circle back.

MS. CHARLIE: Good morning. My name is
Perfilliea Charlie. I'm the principal at Tonalea/Redlake
area western agency.

(Presentation in native language.)

That's who I am as a Navajo woman, and I am proud
to introduce my committee that are here as the panel. They
are all representatives of the school. We have one long-
term teacher that has taught every grade level within the
school building that you are about to hear for over 30
years that's joining us. We also have our stakeholders who
have been able to come the long dive with us this morning.

So I'm proud to say that our staff majority, 100 percent of our staff volunteer grandparents are all very true models of their cultural heritage, Navajo. We also have other tribals that come up from Utah border, as well as some of the California tribes that come in that speak their language, and we do the best we can to ensure the cultural riches that we have as a western agency.

So let me go ahead and start the presentation with a few slides. Tonalea is home of the wildcats. We do have wildcats around the area, and hopefully we will be able to give you the feeling of walking the path of our staff and students to be able to see where we are located as best as we could.

The Navajo name for Tonalea is [], Where the Spring Gathers. It's not a waterfall, I thought it was a waterfall when I first got there, but it's not, it's where the stream ends. Here is our new school placement request, and we are amongst the Navajo people that are very close by.

Next slide. To give you an overview of the community of Redlake, we have close to 600 voting people within the Redlake area, and we have close to 200 student enrollment, kindergarten through 8th grade. We have over 37 to 40 staff volunteer every grade level kindergarten
through 8th grade. And we also have a lot of elders that we have contracted with the Navajo Nation for the last nine years that have been very consistent in working in our classrooms to be ensuring that we still have respect for the elders within the community. And a lot of our elder parents do promote and teach the cultural, the language and the enriching that we have.

We have 94.11 percent ADM rate according to our NASIS program. All of our students that do eat breakfast, lunch, and we also serve sack lunches daily for our students are a hundred percent free and reduced lunch.

We have five total bus drivers. Our longest route pulls in close to 70 miles, and our first students do get on board at 5:07 in the morning and return home until 5:45 in the evening. And if you can imagine, if they are in sports, you can add another two more hours to that route. So our students don't get home until close to 9 o'clock. And if you can envision the inclement weather we have and the mud and you can add another hour to that.

Tonalea building was built in 1959, so when we get to our presenter that will share the historical portion, we will walk you through the path of our students since 1959.

Other socioeconomic status for our population, we have close to 63 population that do come from single parent
homes. We have a lot of our students that are being raised by grandparents, guardianship, or have power of attorney within our student population. Majority of our families do have seasonal jobs, and to envision that they drive at least an hour and a half to two hours either to Page, to Flagstaff, or to Kayenta to have a job. That's how far they come in, so that's the reason why our students are being raised more by the grandparents.

I myself drive to and from Flagstaff every day being committed and dedicated to the school, so I pretty much can give you a tour, and if you can imagine leaving every day quarter to 6 in the morning to be on site as soon as possible.

Next slide. Our mission statement which I'm proud to say has just been reviewed and adopted. December the 10th the board members, the community, the chapter has been able to work and do a bunch of surveys, translations, also get everyone's input, and our mission statement pretty much states that Tonalea Day School will engage in a healthy foundation and learning environment, be able to educate all of the children in a diverse challenge for the 21st century.

21st century means that we do have a partnership with a lot of the higher education, universities such as NAU that do come in, we have some student teachers that
want to be able to share some of diversion educational for our students. And according to our mission in one of our application questionnaire, this mission was also imbedded and is alive with the cultural, spiritual, mental, physical mission that everyone kind of put together. So that's that's our new mission statement.

Next slide. Tonalea Day School, like I said, was built in the late 50s. There is several exterior work that has been completed. You have several pictures here that we have blown up to give you an insight of what's the underlaying foundation, a lot of patchwork along the way.

So here I'm going to introduce our long-term educator, one of our occasional leaders, Ms. Lena. She'll introduce herself and take you to the path of the next since 1959.

MS. DAYZIE: Good morning. My name is Lena Dayzie. I'm honored to have the privilege to come before you and share a little history of our school.

So Tonalea Day School was built in 1959, and I have gone to school there since 1960 all the way to 5th grade, and then I left to continue in other schools like Tuba City Public School.

And here is our current school, looking from the front. And it has been worked on on the outer side numerous of times. And now there is various cracks that
are appearing again, and the floors buckle up, doors jam, and I often see water seeping in from the basement or either from the roof that causes mildew on the wall from time to time. And in the springtime there is dust sand that blow in and infestation of mice and bugs. And then during the winter months it is very cold when the boiler goes down. And the new addition was built in 1983, however the structure is already beginning to fall apart.

Next slide. This is the overview of the enrollment over the five years. As you see that in 2013-14 and 15 we had a high enrollment which was over 200. And from years before they were in that range, and we had to double up the grades from kindergarten all the way to 8th grade, and we were very, very crowded in that little school building. I mean it's small, but it's not huge.

So we, right now we're down a little bit, but I know next year when we get a new building, I mean we will have that enrollment back up.

Next slide. And then this is the overview of the whole grade, the student count, the percentage of attendance and years of the teachers that have taught, and the parent involvement. Right now the current enrollment is at 193, the attendance is at 94 percent.

Currently there is an overcrowding of students in the classrooms with students and furnitures. And the
furnitures, the desks are like the kind that's here, the
tables, and they are just compact adjacent to one another,
and two students at each table, and then the furniture
right along the side with my reference, my desk -- I mean,
it's truly overcrowded. And then the parent involvement is
averaging at 70 percent.

And then my next presenter will be Mr. Keidrick June.

MR. JUNE: Good morning. My name is Keidrick June. I'm originally from Kayenta. I travel 22 miles to
Tonalea Day School. I'm a facility supervisor at Tonalea Day School. I have been working there for seven years and
three months.

So in my seven years I have been repairing and
renovating 12 buildings, six quarters. Each were built at
different times. So each built at different times to
accommodate more staff and students that keep coming and
going that keep working.

The school originally started with three
buildings and five living quarters. The main building
consisted of two classrooms, two offices, a cafeteria and a
kitchen, and this still was not enough to accommodate those
few students that kept enrolling into Tonalea Day School.

So the building had to be extended with four more
classrooms back in 1961. And also one more building was
added to accommodate the maintenance, facility maintenance office, and three more quarters, and two apartments were also added to accommodate for more teachers.

When the building was engineered and constructed back in the 1950s, the standards were a lot different at the time and also electrical codes were also different. The main building -- the main building had no ground wires connecting all the panels throughout the building because of the extensions, and what we found was they are still using 14-gauge wires in some classrooms to, to accommodate electrical outlets.

This type of engineering is not up to standard and we have to force it to function properly. It has cost the school a lot of money to repair and replace damaged equipment due to this type of engineering. The main building right now is not in compliance with any ADA requirements and does not allow for access for a person in a wheelchair.

The school does not have a sprinkler system in case of emergency and the fire panel that will not function correctly during the power outages. The estimated costs to repair and renovate the building to full compliance is estimated at $18 million, which exceeds the original building costs.

These are not -- this is not my biggest concern.
Our biggest concern are these cracks in the building. As you can see there is cracks coming along the building from the windows and the structures and also the plants are growing through those cracks on the south side of the wall. Also the blow sand comes all in the windowsills from the cracks that are separating around the windows. And also on the floor right here in the bathroom, the plants are growing out, just mostly vines, and we have -- this is part of a code we violated right here because of the crack in the ceiling. And so that was one of my biggest concerns because the building is still settling after 50 years. In 1997 we did have helical piers installed under the main -- underneath the main school building to slow down the -- slow down the settlement of the building. The settling has caused damage to the main buildings, and you can see the cracks, the cracks that appear.

Every day we find new cracks, which causes blow sand to enter the building into the kitchen and food storage areas. This blow sand also comes through the windows and joints and expansion joints in the classrooms which causes children's allergies to flare up during the windy season.

I believe that the building keeps moving and settling. I believe it could be a -- they might condemn
our building, so this is our real concern right now. Thank you.

MS. CHARLIE: Like any other instructional leader, I didn't go over my binder with you because we wanted to make sure you get our really important introduction. In the handout we have for the 13 committees, we have the PowerPoint slide that you see up. In your handout we also included some pictures that we are going to wrap this presentation in the best way we could. In the last section there are supporting documents that are current and up to date.

The pictures that you see up here being showcased are actual pictures we have taken last week. We wanted to give the actual pictures to date as well as the pictures that were in the application process. So we had the facility that went around and showed the pictures of all the classrooms, especially the lower wing kindergarten through 4th grade that do have separation in the ceiling. We also have the actual pictures of the plants. I had facility guys remove the cover from the heater to show the actual plants are growing right now in this cold weather. As of last Wednesday, that's how current these pictures are. And also the patch up with the fourth picture here that's largely the emergency exit, the crackings that are there.
According to the backlog and a lot of the work tickets we were able to research, the facility people have been patching these up at least three times within our nine month academic year. So you can imagine some of the students that wait in line to get their lunch can see the crack for at least two inches apart straight into the principal's office. So if they are waiting in line, they kind of all laugh as they get their trays looking all the say through two buildings. Which I didn't know about until last week, so that gives you an idea what the students are seeing each year.

The last picture down at the bottom are actual plants in the boy's restroom. We have only four restrooms, two girls and two boys in the whole building of the first PowerPoint that you see. The current picture down on the bottom is actual plants, if you can see the roots. Not only are they growing in the bathrooms, this is where the moisture is, but we also have pictures of the dry foods in the kitchen area where all the roots are pretty much underneath the whole foundation of the school building.

So we will go ahead and have Ms. Lena Dayzie go over the -- how they have adapted considering the facility and aging of the school, of the staff adapting to the facility and still making educational worthwhile of our students.
MS. DAYZIE: Currently we are serving Tuba City Public School, Tuba City Boarding School, Gray Hills Academy, Shonto Preparatory and Shonto. Those are the surrounding schools that we share students with and they transfer in and transfer out for whatever reason that comes about. And then currently we have two Navajo head start programs, and many of the students from the head start, because of the limited space that we have, they go to Tuba City Boarding School and the public school, and therefore we are losing students every school year and because of the overcrowding situation.

This year we have 31 kindergartners, and then we have a bus route, Route 16, that goes to White Mesa, Route 62-60 and 62-70 which was mentioned before that covers 70 miles a day, and some of these students do not have running water or electricity and oftentimes they sign up for tutoring after school so they can finish that work for that day so they don't have to do it at home.

And then we also have Tonalea School, there are 24 students with IEPs, and the teacher travels 50 miles to meet with student's parents, and we need to accommodate these children with rails, ramps for their wheelchair so they can access the building and also in the restroom.

One of the parent had a complaint about the restroom not being adequate for her child and they withdrew
her from school. Now we have a little boy that is in a special walker who often needs to rest, and the teacher actually ordered special resting pads. And she sits down underneath the promethean board in the classroom, so he is laying there and does his work. So it's long day for him, too, for that child to be there, but he is there, and the parents are happy with the education that he is being provided with right now.

And then the kindergarten classroom, there are 30 students, and this library was created to be a classroom, too, to alleviate the overcrowding. And there was no room large enough for these kindergartners to utilize, and they have two teachers now, so they will be getting the appropriate instruction that they need, and one educational assistant that goes between the two teachers.

And then this one is the teachers' office, which was the back entrance to the library. And then this -- there is chairs here and that's where she puts some of her instructional material or bulletin board stuff right there. As you can see it's really cluttered already on the counter. We need a lot of storage area.

Next slide. This is the -- used to be the home economics room back in the 1980s. Now it's the special education room. There are five staff working with these students in this department, and as you can see it's
overcrowded with special equipment that the students utilize in that classroom. And some of the students go to the modular building to receive special services such as speech and occupational therapy and counseling. And throughout the week the kindergartners through 8th grade go to this modular trailer to receive instruction in life skills.

And then the promethean board is put in a crowded area, and the students sit right in front of that to be given instruction, and the teacher sits off to another section, and with the teacher and the assistant, and that will be a Xerox copying machine right next to them.

And then another thing I ought to say about the Navajo culture classes that, you know, the Navajo Nation has come up with their curriculum, and to -- to enhance their culture and language and which is the requirement for all the schools on the Navajo reservation to do.

And we have an octagon that could be utilized by the grandparents that come to our school to reenforce the language and culture along with the teacher. And we have Indian club that perform traditional dances and grandparents that demonstrate native food preparation, and weaving, textiles and silversmithing, shoe games and horsemanship that are introduced to the kids.

And we often have presenters that come in and
these are all emphatic and to the mission statement. And then lastly there is our school, and then we would like to see a new school building in our community for our future generation, housing for teachers so we can create an environment that -- that is nice, and for the employees, a safe working environment for teachers and the general public, and then an office that is -- that is separate for where it's not in the open area to hold all the confidential information.

And this is one of the photos that we give out for -- excuse me -- this is one of the summer recruitment that we do where we give out literature, enrollment packet, and workbook for students to work on during the vacation.

And then this is when I returned back to Tonalea School back in 1980 to teach, and I have taught in every classroom from kindergarten through 8th grade and have seen all the changes that we are going through, and regardless we are still on the forefront teaching these children and doing the best we can to educate them. And then some of the despite of what is going on, some of these students have gone to college. They are recipient of the Chief Manuelito scholarship, the Gate Millennium Scholarship and putting the Tonalea School on the map.

And these are the children that I have taught, whose children I'm teaching, I'm very proud to say. And
then these are our future generation for the upcoming years
to come, and then they -- they are in the freshman school
year. Thank you very much.

MS. CHARLIE: Okay. We didn't really go over all
the of -- the backlog. We have that all in your
application that we submitted. We wanted to give you
current one. So here we have some students who are present
for a new school building, so we will go ahead and give
them the last two, three minutes to hear from our student
council. We do have a Native American Club who are very
active and their parents and grandparents are very good
role models and stakeholders in our school.

After the video we will go ahead and have the two
stakeholders close up our presentation. We have been
practicing, so I think we are doing good.

(Video played.)

MS. CHARLIE: These are our students that have a
dream, even though asking for a dorm is overwhelming, a
little bit more to the budget we are allocating, but these
are their true words. This is what they are hoping for out
in western area. This is that they wanted to request of
the committee.

In your packet we have the most cultural annual
event that we, not only do we do it during our Native
American week or Native American month, Tonalea is proud to
say we actually host at least two to three events. In your handout we have the most recent which was Friday, January 29th, we had a shoe game. That's a shoe game that was held. We had close to 100 participants from the all the surrounding areas that participated. We had presenters there shared in all the grade levels and in the evening we invited all the community members.

We also see the "Yagashay" dance that was held during the winter. And we will have the two stakeholders come up and wrap up our last one minute. Colbert and -- they are going to share the one minute in our closing.

MS. CLAW: Good morning. My name is Delores Claw. I'm a community member, grandparent and parent there, and I also represent the school there as the school board president.

I would like to also include words on overcrowding. We don't have very much space for our chemicals where the janitorial can keep their cleaning supplies in or the facility where they have to store hazardous chemicals, we don't have storage areas for those so they are actually sitting out, and sometimes those are deficiencies, so we need a lot of storage.

And then the classrooms, I remember when I was working there, we had classrooms separated, classrooms that way and then clinic area this way or either an office they
had to share one classroom. So we do need a lot of classroom space for our students. And then also the boiler is not up to standard sometimes, it breaks down, and the school is always cold during the winter months, so that's really a concern.

And then also our technology, our building is always not up to the standards within our technology. We have started a lab, computer lab way back and it, it didn't actually work because of the electrical problems. It keeps overloading, but we want every child to have a desk -- I mean a computer at their desk, kindergarten through 8th grade, we want them to use the computers. That's my number one thing that I want done for the school.

And then also we need office space, and then it really affects our -- our accreditation with a lot of these is because of our students that are out in the remote areas, and the bus roads are really awful during the winter months and the rainy months and a lot of them don't come to school, so -- because the bus can't reach them.

So we also do -- would like to advocate for a residential hall to hold up to at least 80 students, and that's one of the main concerns that I have because of the electricity and no running water out there, and some of the students do like to be a part of the extra curriculum that is being offered at the school, and due to the roads
and some of them don't participate. So I would like to have everything -- a new school, dining room, everything. I remember my uncle working there for the longest time, and my mom even went to school there, and I went to school there, and my grandkids are going to school there now, so it's a long generation thing. We have memories there.

So it's really sad to see that the building is coming apart and I just would like to see a new school for our students to enjoy. Thank you.

MS. BORGESON: We are now into our question and answer time frame so perhaps your stakeholder -- we need to address the three questions, and perhaps your other stakeholder can speak during that time once you have answered the three questions.

I have a low battery here, so I will let you keep that one while I change the battery so you can answer. So the first question has to do with completing -- being able to complete all of the plan requirements during that 18-month period that's allotted for planning and if you feel like you will be able to meet that 18-month time line.

MS. CHARLIE: Yes. In the packet we have given you, we have dug high low of all -- this is not the first time Tonalea has applied for the new school application process. Actually this is like the third time within the last 15 years, so we kind of missed the boat several times.
But in your packet we do have supporting documents of the land, and I will go ahead and give the mic over to my other colleague as the fifth presenter to answer those more in depth.

MR. CLIFFORD: Good morning. My name is Lyle Clifford, facility management, Western Navajo Agency. With regards to the first question, yes, we do have land. It will be built on site, and with regards to the utilities, we have NTUA. That's who we use now. We do definitely need an upgrade. A lot of times they point the finger to the school and that may be, but NTUA has some issues, too, with their equipment. So we also have one water well there, so it would be wonderful to upgrade that. And then we have a lagoon with two cells.

And then the school runs on propane, and we have a 12,000-gallon tank there that is sufficient. With regards to the geotechnical surveys and NEPA review, we would definitely want to request assistance from region, BIA Navajo Regional Office, so with regards to that question we are -- we will be able to move on that.

What was the next question?

MS. BORGESON: The next question has to do with how your program meets the BIE requirements for addressing every -- all the aspects of a -- of the student learning, their spiritual, cultural, as well as academic aspects of
the BIE program. How does your program address that?

MS. CHARLIE: At the beginning we mentioned the mission statement. Our vision statement is very current. We do comply with the 25 C with ensuring retaining and keeping the language and the culture very forefront for our educational setting.

All the way as early as the early childhood, like we mentioned, we have three head start programs that are very walking distance. The little 2 and 3-year-old preschool can actually walk to our school. That's how close we are to the head start. The curriculum we do share. We have a very up to par and very most recent, with our stakeholders' approval, we have a kindergarten transition program that's very current. You are more than welcome to look into our Tonalea Native Star. You can see the current signed agreement that's in place with the three head start to partner with kindergarten. As we have mentioned, the data that we have with our kindergarten is a high number; we have over 31 students. So there is a very strong partnership, as well as our outgoing 8th graders that are in high school.

I would say, I will have Lena address this, the majority of the students do understand the Navajo language and the culture and also the nine-year contract that we have in the agreement with the Navajo Nation Elder Program
that do a lot of their cultural presentation with traditional food making that is very -- it does pass the cafeteria menu.

We also promote a lot of the cultural settings and being able to do even the seasonal dances in the culture. We have a hogan that's on site if you look into or back area as the heart of the school to revive and retain the cultural key.

So I will have Lena allude to the cultural language for the learners there.

MS. DAYZIE: We are using the current Navajo Nation curriculum that they have adopted and all the materials that go with it, so we are going objective by objective. That's what I'm doing in my classroom, and I often go around and ask the other teachers if they are doing that, also, and I know that they are. And right now one of my objectives is for my second graders to know their four first basic clans so they can verbally say it.

And then the next objective is knowing the Navajo pledge, so we are abiding by our Navajo Nation curriculum.

Thank you.

MS. CHARLIE: What our facility failed to say, most of our staff wear multiple hats because it's a small school in a very isolated area. I would say, like I mentioned in my introduction, all of the staff do speak the
Navajo language or their representing tribe. They also share doing presentations. Our facility person here is also a basketball coach. Our other facility is a silversmith, so we have moccasin makers that are still there — very, very — I mean real. It's really nice to go back out and actually see a lot of the educational workshops, the sessions, even the grandparents, elders that are there to speak the language.

All of our elders, I would say two of them are not able to read English, but they are there to promote the language piece, which of all schools I have visited, the Tonalea, to have the elders there is very strong, real, and you see them in the classroom, and they are there for a good five hours every day. Every morning they are there to aid the student, they are working partners with the classroom.

Lena has her grandparent with her every day all day long. And your last supporting document page is the letter from some of the other students with their signature. As you know, our PARCC assessment, a persuasive letter, this was just written, and this is what they wanted to put in the packet as well.

MS. BORGESON: Ms. Charlie, before you go on to the next question, see if the committee had some follow-up questions at this point in time to the two questions that
have been posed. Any follow-up for any of the two questions we presented so far.

MR. KEEL: I have one. Dale Keel. In your information packet you have a layout in the back. Is this -- is that the proposed layout of your new school or is that your existing.

MR. JUNE: That's the existing.

MR. KEEL: What kind of layout are you looking for for the new school? There seems to be a lot of separation in the buildings, or are you looking at more of a condensed school area where everything is contained in one building or looking for several buildings.

MR. JUNE: In the picture the separated buildings are quarters, and we do have separate classrooms outside on the exterior of the main building. But we do want to condense the building.

MR. KEEL: What size of school are you looking to build? How big is the school now?

MR. CLIFFORD: What's the total square footage on it, I don't know offhand, Dale.

MS. CHARLIE: Definitely at the beginning of the first application process doing the research back in the early 80s, it was a case K 6, and with a lot of students and with our neighboring we extended it to five -- our kindergarten through 8th grade. Now we have the early
childhood and kindergarten and preschool that's kind of way up. So in some of the requested application, and with all the stakeholders, it's kindergarten through 8th. We are hoping for a 300 student population. That's very ideal and realistic based on the numbers -- if you are look in our application packet -- where is my cheat sheet? I had a little cheat sheet here -- there is a three year data there. The highest number we in our NASIS was 240 students, that was the highest peak number we had in that last three years in the three-year data. So I know it's realistic to have 250 students there for kindergarten through 8th grade.

We have about four high schools in the surrounding, because I know our high schools, 8th graders are doing the transition visiting, so they go all the way as high as a three and a half hour drive to Richfield. The other one is to Flag High Dormitory or Holbrook. Of course there is to Tuba City Boarding School down as well.

A lot of the parents and divisions of stakeholders want to go further on out to the border towns for sports. You know we have very good awesome basketball players, so they want to go -- we accept people that come out that want to recruit some of our players on out. So he is also a basketball coach, and I think that is something you capitalize, and you heard that in the video.
MR. MAHLE: Your land base, where your plot shows, how much acreage do you all have?

MR. CLIFFORD: That was a question that I had before coming in here, and I didn't get the total acreage, but we do have on the east side a large section to build at that -- onsite build though.

MR. MAHLE: So there is no legal description anywhere on file --

MR. CLIFFORD: Yes.

MR. MAHLE: As far as -- that should state what the land base is for the site?

MR. CLIFFORD: Yes.

MS. CHARLIE: We have 8 to 10 acres that have been approved by the archeologist clearance from the Navajo Nation. We have the three-year data and it's proposed for 8 to 10 acres. One of the pictures that we have in here is for actually where the football site is. It's that whole flat area. And I know, speaking with the Navajo Nation just two weeks ago when we were trying to pull the most recent, it is free of the water, it's free of flood zone -- I guess that's the right term, flood zone. It's been okayed for the last 20 years. The rock clearance are cleared. There is no bones. But it's been good for 20 years, I know that, that's what we got from the Navajo Nation.
MR. MAHLE: Okay. Final question is, I have heard the term you wanted a residential -- is it a residential facility right now? Is there residential?

MS. CHARLIE: No.

MR. MAHLE: So has there been a request for expansion?

MS. CHARLIE: With the last two application process, yes.

MR. MAHLE: Not been approved though?

MS. CHARLIE: We have never even gotten this far. We are honored to have gotten this far. The committee can attest to it. It was a hurdle over the first one and we are hoping we go past the second. So it's been good.

MS. BORGESON: Any other committee questions up to this point?

MR. HASTINGS: You said that the reason the ceiling and floors were separating is because of settlement. If you are going to build back on this same area, how are you going to keep that from happening again?

MR. JUNE: Well, this was -- this area right here was built back in the 1960s, so the engineering, I don't think it was good.

MR. HASTINGS: You don't think the soil was compacted and everything.

MR. JUNE: Yes, and it's still settling.
MS. BORGESON: Any other comments or questions from committee?

(No response.)

MS. BORGESON: All right, the last question. How does the current condition affect your ability to run a day-to-day education program. Items to address include power outages, lack of internet access, adequate water, adequate utility systems.

MR. CLIFFORD: As was brought out, we are constantly having electrical outages. Like I said, NTUA has not accomplished anything. They continually point the finger. We have had some -- we have had some studies or metered systems put in place by NTUA to see where it stands. And once again, they are not finding anything too outstanding, but we definitely have issues, especially during the monsoon season, but throughout the year -- and it knocks out all of our batteries, it knocks out motors with regards to our different electrical components at the school. So this is a major issue that continues to, to go on.

Now, we -- we turn in MI in our request MI in our projects yearly, and they are taken care of, but we are just putting a temporary Band-Aid not being able to solve the real problems.

MS. BORGESON: Any questions from the committee
on that last question?

MS. ZAJICEK: If you are going to build on the football field, then what -- are you going to have another football field, or what are you going to have, a playground, or what are you going to do? Is that part of your plan to rebuild?

MR. CLIFFORD: Yes, we would like to rebuild, but just recently we have had two schools built, both -- so we can take down a building -- (microphone feedback.) So anyways we have done that. They are at our other schools, so we can tear down and rebuild at the same location or close by so that we do have the extra space for the athletics.

Just a -- just another note, you know, we are getting close to being 60 years old, the school. To illustrate that, as soon as I hit my 60s, I am starting to fall apart, and I'm sure all of us know that with regards to any type of building structure, we have the infrastructure will be falling apart, and we have had that in several of our schools and we have to address it.

MS. BORGESON: I hear my alarm going off.

MS. MATTINGLY: You just said there were two schools, two new schools built nearby.

MR. CLIFFORD: That's why we are losing.

MS. MATTINGLY: How close are they?
MR. CLIFFORD: That's why we are losing students.

30 miles each way.

MS. MATTINGLY: So 15 miles one way?

MR. CLIFFORD: No, 30 miles one way. And they bring their buses over to the Tonalea area.

MS. MATTINGLY: So there are alternative schools for the kids to go to?

MR. CLIFFORD: Yes.

MS. BORGESON: All right. That completes our time limit.

MR. KEEL: I think we need to let the last stakeholder speak.

MS. BORGESON: If that's the committee's request, we can certainly do.

MR. DAYZE: Good morning. My name is Colbert Dayze. I'm part of the stakeholders, I'm the -- the Tonalea tribe. I have been for the last three years.

(Presenting in native language.)

Thank you for this opportunity to address. You have heard the testimony today. The Tonalea Chapter, one of the primary concerns is the safety of our children and staff that work -- they work in a safe environment.

Tonalea is unique. We have families that are still on Hopi partition lands, families that are on NPL and also the -- the area where the chapter is and where the
school is located was subject to land title. We had land
dispute for more than 45 years. The title to ownership has
been resolved, and we are rebuilding. We are working at
chapter level to bring in improved infrastructure, and part
of the development is the school. We need a new school.
The census show that there was about 2,500, the
population, but today, there are 3,000 in the community.
And our land base is pre large because we covered quite a
territory.

Our chapter was also built in 19 -- around 1959
and we were able to secure some funding for the demolition
and reconstruction, so we are rebuilding, and it's time
that we rebuild. And with the testimonies you heard today,
I implore you that we need to move forward into the next
generation to bring -- continue to provide education and a
safe environment for our children, a safe environment for
our students.

So with that, I thank you for this opportunity to
be here today and to address our concerns, and thank you
very much. In conclusion, my written statement is in the
package.

MS. BORGESON: Thank you very much. Thank you
Tonalea team for presenting this morning, and this
concludes our presentations for the top ten schools. Thank
you all. (Tonalea presentation concluded.)
I, IRENE DELGADO, Court Reporter for the State of New Mexico, hereby certify that I reported the foregoing proceeding, and that the foregoing pages are a true and correct transcript of my stenographic notes and were reduced to typewritten transcript through Computer-Aided Transcription; and that on the date I reported these proceedings, I was a New Mexico Certified Court Reporter.
