

# Indian Service Population and Labor Force Estimates

U.S. Department of the Interior  
Bureau of Indian Affairs

1993

# **Indian Service Population and Labor Force Estimates**

U.S. Department of the Interior  
Bureau of Indian Affairs

## **Purpose**

The purpose of this report is to provide estimates of the service population of the Bureau of Indian Affairs (BIA) and the population's labor force status in calendar year 1993. This report supplies estimated information related to the labor force itself. It does not provide other combinations of data or conclusions other than those represented on these pages.

## **Definitions and Coverage**

The total Indian population of the United States, as reported in the 1990 United States census, is 1,937,391. The population estimate of the U.S. Census Bureau is based on self-reporting and includes American Indians, Eskimos and Aleuts who reside on or adjacent to reservations *or* off reservations in urban areas.

The data contained in this report provide the labor force status of the 1,183,967 Indians residing on or adjacent to Indian reservations governed by Federally-recognized Indian tribes. The data contained in this report are confined to the population and the labor force status of persons who are members of Indian tribes or who are one-fourth degree or more blood quantum descendants of a member of any tribe, band, nation, rancheria, colony, pueblo, or community, including Alaska Native villages or regional village corporations defined in or established pursuant to the Alaska Native Claims Settlement Act. Therefore, this report does not provide the labor force status of Indians who reside in urban or rural areas not adjacent to reservations or who are not members of an Indian tribe or at least one-fourth blood quantum descendants.

## **Study Methodology**

Local BIA agencies collected data from tribes, household surveys, school records, employment records, tribal election statistics, tribal membership rolls, and BIA program services records. Accuracy of information varies due to the size of geographic areas covered, isolation of many communities, and differing levels of cooperation among respondents. In the majority of cases, data are estimated and not representative of an actual count. Data are reported as collected. In those areas where no new data were obtained, 1991 or 1989 data are used, as reported in the 1991 publication of this report, and are identified by footnote in table 3.

## **Labor Force Report Format**

The population and labor force data are shown in three tables. Table 1 provides population and labor force data by state. Table 2 shows population and labor force data by BIA area office and state. Table 3 is the most detailed, showing the population and its labor force status by tribe, state, and servicing BIA organizational elements, i.e., area offices and local agencies.

### **Summary**

As defined by the Bureau of Labor Statistics ( BLS ), the “potential labor force” ( column 7 ) is comprised of all individuals 16 years old and over, excluding students and those who either must care for children, are retired, or are disabled. Thus, the total potential work force was comprised of 549,744 individuals in 1993. This is an increase in the total potential labor force of 73,874, or 16 percent since 1991 when this report was last published. Of the total potential labor force, 46 percent of persons were unemployed in 1993, compared to 45 percent in 1991. The total potential labor force unemployment rate remained stable over the two year period despite the growth in the potential labor force because employment also increased at a significant rate, by approximately 24 percent.

Of the 255,393 persons unemployed (column 9 ), 169,642 are seeking work (column 13). Those 85,751 persons not seeking work include persons who have been discouraged from seeking work; those who have no available work opportunities in the immediate area; or, have no means of transportation to seek work elsewhere. These individuals are omitted from the standard BLS definitions of labor force and unemployed.

Therefore, by BLS definition, the “labor force” ( column 11) consists of persons employed or persons seeking work. The total labor force is 463,993, an increase of 69,434 over 1991, or 18 percent. Of the total labor force, 37 percent of persons were unemployed and seeking work in 1993, compared to 35 percent in 1991. The labor force unemployment rate increased only slightly over the two year period despite the growth in the labor force because employment increased by approximately 24 percent.

In 1993, only 27 percent of persons employed and between the ages of 16 and 64 earn \$7,000 or more (column 16). In 1991, 25 percent of persons aged 16 through 64 earned \$7,000 or more.
